

**PERFORMANCE DATA SHEET**

3007

**Human CD152(CTLA-4)-muIg/APC Fusion Protein\***  
(also binds to mouse CD80/CD86)

**CATALOG#: 501-060**

**QUANTITY: 50 tests**

**VOLUME IN VIAL: 200 µl**

**WORKING DILUTION: 1:20** (or use 4 ul of concentrated stock per 5 x 10<sup>5</sup>-cell test)

**Molecular Structure:** A soluble 110 kd dimeric fusion protein consisting of the extracellular (125aa) domain of human CD152 (CTLA-4) fused to murine IgG2a Fc

**Transfectant Cell Line:** BHK

**INFORMATION:** Immune response mediated by T cells can be characterized to functionally proceed as follows: antigen recognition by the T cell receptor, activation through costimulation, effector activities to eliminate antigen and finally down regulation. Human CD152 is a cell surface glycoprotein expressed at low levels on activated T cells. CD152 is a high affinity receptor for the costimulatory molecules CD80 (B7-1) and CD86 (B7-2) and appears to function as a negative regulator of T cell activation. Therefore, CD152 may be an important player in down regulating T cell mediated immune responses. The CD152 Ig fusion protein has biological activity and binds with high affinity to human or mouse CD80 (B7-1) and CD86 (B7-2). CD152 Ig will block the binding of anti-CD80 (B7-1) and anti-CD86 (B7-2) monoclonal antibodies.

**STORAGE CONDITIONS:** Store at 2 - 5°C. Freeze/Thawing is not recommended. Protect from light.

**PRODUCT STABILITY:** Product should retain activity for at least 12 months after shipping date when stored as recommended. Ship Date: \_\_\_\_\_

**BUFFER:** 50 mM Sodium Phosphate pH 7.5, 500 mM Potassium Chloride, 150mM NaCl, 15% Glycerol, 0.2% BSA, 0.04% NaN<sub>3</sub> (as a preservative)

**PRODUCTION:** Human CD152-muIg fusion protein from tissue culture supernatant of BHK transfectants was Protein A purified to >95% by SDS-PAGE (<1% bovine immunoglobulin), and conjugated to Allophycocyanin through a sulfo-ester linkage. Unconjugated fusion protein was removed using size exclusion chromatography. CD152-muIg/APC conjugate is at **0.2 mg/ml** with an APC to Protein molar ratio of 1.27.

**PERFORMANCE:** Five x 10<sup>5</sup> cultured **Raji** human tumor cells were washed and incubated 45 minutes on ice with 80 µl of CD152-muIg/APC at a dilution factor of **1:20** (10 µg/ml). Cells were washed three times, fixed and analyzed using by FACS. The cells stained positive with a mean shift of **2.2 log<sub>10</sub>** fluorescent units when compared to background. Binding was blocked when cells were pre incubated with 20 µl of 0.5 mg/ml unconjugated CD152-muIg (Catalog #501-020).
