

PERFORMANCE DATA SHEET

1817

*Monoclonal anti-human IL-2/R-PE**

mAb name/Clone: ANC7F7

Isotype: Mouse IgG1 κ

Immunogen: Recombinant human IL-2

CATALOG#: 245-050

QUANTITY: 120 tests

VOLUME IN VIAL: 0.2 ml

WORKING DILUTION: 1:50 (or use 1.6ul of concentrated stock per 5×10^5 -cell test)

INFORMATION: The cytokine human interleukin-2 (IL-2) is a 15 kd protein expressed upon activation by peripheral TH1 cells, medullary thymocytes, and a subset of large granular lymphocytes. Secreted IL-2 stimulates proliferation and lymphokine production by T cells, B cells and NK cells.

STORAGE CONDITIONS: *Store at 2 - 5°C. Do not freeze! Protect from light.*

PRODUCT STABILITY: Product should retain activity for at least 12 months after shipping date when stored as recommended. Ship Date: _____

BUFFER: 50 mM Sodium Phosphate pH 7.5, 500 mM Potassium Chloride, 150mM NaCl, 15% Glycerol, 0.2% BSA, 0.04% NaN₃ (as a preservative).

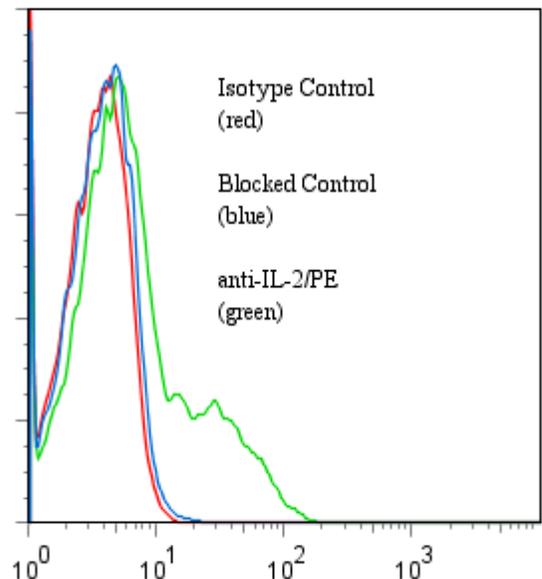

PRODUCTION: Protein A purified antibody from tissue culture supernatant was conjugated to R-Phycoerythrin through a sulfo-ester linkage. Unconjugated antibody was removed using size exclusion chromatography. Antibody conjugate is at **0.25 mg/ml** with an A₅₆₅/A₂₈₀ ratio of 3.35.

PERFORMANCE: Ficoll prepared human **peripheral blood mononuclear cells** were stimulated 4 hours in the presence of 50 ng/ml PMA, 2 μ M ionomycin and 5 μ M monensin. Cells were then harvested, washed and fixed for 30 min with 2% buffered formaldehyde after which they were washed two times. Fixed cells were permeabilized 10 minutes in a buffer containing **0.3% Saponin**. Subsequent reagent incubations and washes were done using this buffer. Five $\times 10^5$ cells per tube were pre incubated 5 minutes with 20 μ l of 250 μ g/ml human IgG (to block nonspecific binding), after which they were incubated 45 minutes on ice with 80 μ l of anti-IL-2/R-PE at a **1:50** dilution (5 μ g/ml). Cells were washed three times, fixed and analyzed by FACS using a lymphocyte gate. A net **19%** sub population of the cells stained positive with a mean shift of **1.0** log₁₀ fluorescent units when compared to a Mouse IgG1/R-PE negative control (Catalog #278-050) at a similar concentration. Binding was blocked when cells were pre incubated 10 minutes with 20 μ l of 0.5 mg/ml anti-IL-2 antibody (Catalog #245-020).

**This Product is intended for Laboratory Research use only.*

R-Phycoerythrin (R-PE) is covered under patents: U.S. 4,520,110; European 76,695 and Canadian 1,179,942.

Binding of anti-IL-2/PE to fixed permeabilized, stimulated human PBMC
